

## Heron

A variety of herons reside on the island, including the Black-crowned Night Heron.

The heron is a carnivorous species, feeding on fish, reptiles, and insects.

## Egret

At Paradise, you'll find black and snowy egrets that reside mostly around the main lagoon. They have specialized feet to help them collect food like fish, amphibians, and more.

*Pekin Duck*

### NO BREAD!

### Why?

Bread pollutes the water and causes surface algae which kills our fish friends. It also hurts the ducks bellies and makes them ill.

**Duck and fish food is available at the Island Market.**

## Duck, Duck...

*Mottled Duck*

*Mallard Duck*

*Black Runner Duck*

*Koi Fish*

Can be spotted in the Main Lagoon!

*Broad-Tailed Hummingbird*

Can you spot the rose-magenta throat?

*Red-Eared Slider Turtle*

We communicate using vibrations!

*Seagull*

Seagulls drink fresh and saltwater but prefer fresh!

*Baby Seagull "Nestling"*

## Hatchlings

Throughout our 44-acre property, you may see new generations of island inhabitants. Please do not touch or disturb the wildlife.

*Juvenile Egret*
